

InterSession

Mainframe Gateway for z/OS, z/VSE and z/VM

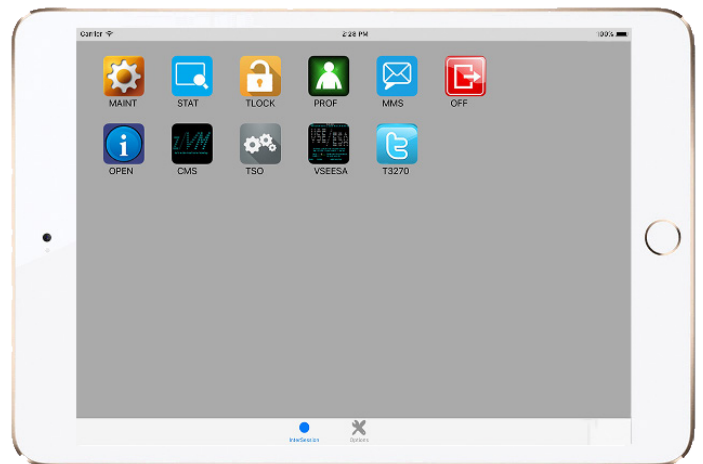

InterSession is much more than a traditional session manager.

Besides all the features you can expect from such a product, *InterSession* has many unique features not found in any other session manager on the market.

The Web Gateway

A built-in web server makes it possible to access your 3270 applications using a web browser, without any extra software installed in the workstation. The Web Gateway runs completely within the mainframe and is compatible with all modern browsers.

The IOS/Android App

Get easy access to your mainframe applications from a tablet computer with the InterSession app. A modern and comfortable way to run your 3270 applications.

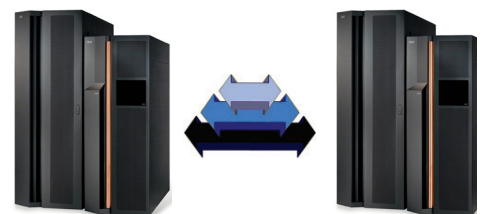

Full tn3270, both in- and outbound

You don't need SNA to access InterSession and your applications. With the built-in tn3270 server you can connect via TCPIP, and the tn3270 client allows you to use remote tn3270 applications as if they were local.

Sysplex Support

In a sysplex, all InterSession instances works together as one. This means that interSession:

- Replicates all settings between the InterSession instances
- Load balance, and have backup for, the user sessions.

Increase Your Enterprise's ...

Productivity

InterSession has several features to increase productivity:

- **Web Gateway.** Access your mainframe applications easily from a web browser.
- **IOS/Android app.** Access your 3270 applications easily from a tablet computer.
- **Multi Application Access.** The user can access as many applications as he/she is allowed to.
- **Scripting Facility.** Application logon/logoff can be automated with the scripting facility.
- **Print Anywhere.** Any 3270 or LAN printer can be set up as a hardcopy printer.
- **Print Gateway.** 3270 print can be routed to LAN printers. Works both for InterSession generated print and other (CICS etc) print.
- **Ad-Hoc Sessions.** Authorized users can start sessions to applications not defined by an administrator.
- **Administration from a Windows client.** Windows based administration client that connects to the host via TN3270. Lowers the skills needed for administration.
- **Message Switching.** Messages can be sent to individual users or groups of users.
- **Top Line Menu.** Immediate access to frequently used functions, such as session switching, printing and cut&paste.
- **Customizable Screens.** All end-user screens can be fully tailored to the user's needs.
- **Conversion Tools.** Convert to InterSession easily from many other session managers.

Security

InterSession has several features to increase security:

- **All Security Systems.** RACF, CA-ACF2® CA-Top Secret®, BSM and ESM.
- **Sysplex Support.** Two or more InterSession instances providing backup for each other.
- **Native SSL.** Built in SSL for Web and TN3270 access.
- **IPV6 Support.**
- **Terminal Lock.** Terminals can be locked after invalid logon attempts.
- **Standby.** Inactive terminals can be set in standby mode.
- **Sign-on Security.** Supports pass tickets for terminal and application signon.
- **Pass phrases and long passwords.** Up to 100 characters passwords/phrases.

Performance

InterSession has several features to increase performance:

- **Built-in TN3270.** Reduces CPU load and number of VTAM sessions. Allows access to other TN3270 hosts.
- **Multi-threaded Sign-On.** Slow operating system calls are multithreaded on z/OS.
- **Compression.** 3270 data can be compressed to reduce network traffic.
- **On-line Statistics.** Helps the Administrator to monitor or tune the system.
- **Accounting.** Accounting records are written to a VSAM file or to SMF.
